

One product to secure ^{all} email channels

AIG

"As part of the functionality offered by AIG Israel's core system - Comtec's Total Insurance System (TIS)- key components of the InfoBay system were also installed, allowing for safe and effective communication with AIG Israel's customers. Thanks to these modules, AIG Israel is able to send sensitive and classified information, as well as large files, simply and conveniently to its customers, while maintaining the highest data security standards and meeting regulation requirements. InfoBay enables AIG Israel to ensure the safety of its customers' information - a top company priority - and to secure the company's status as a technological leader in the insurance industry."

Iris Nachshony, CIO, AIG Israel

About InfoBay

InfoBay is an enterprise-proven, completely secure email platform, offering a suite of products designed to securely protect all stored and transmitted data.

InfoBay targets corporate clients, offering end-to-end security for email and attachments distributed to employees and partners, suppliers and customers, wherever they are.

InfoBay is ISO 27001 Certified.

Why InfoBay?

Businesses today are faced with the challenges of a growing number of security threats and an increasingly compliance-driven business environment. These challenges are especially difficult given the business world's almost total reliance on inherently vulnerable and typically non-compliant email (email may be easily intercepted or altered, email may be easily sent to the wrong party, email delivery is not guaranteed).

Now more than ever businesses are choosing InfoBay - a trusted expert in securing business email information for small enterprises to large-scale service providers.

Join the major industry leaders in finance, insurance and health who trust InfoBay to protect their information and enable them to conform to compliance requirements.

InfoBay Key Features Simplicity

- Senders and receivers enjoy a simple, easy-to-use interface
- InfoBay integrates with Microsoft Outlook, so that back-office users can continue to use Outlook when sending secure information to both internal employees and external customers or partners
- Recipients view information on almost any device using a web browser and an internet connection; no installation required!

Integration and Collaboration

- InfoBay integrates with existing industry security products: mail sanitization, data leak prevention (DLP), electronic signature and more...
- InfoBay supports API (web-service) based integration with enterprise and business applications (such as ERP, CRM, ECM)
- Infobay integrates with organization's Active Directory for single sign-on (automatic user authentication)
- Optional embedding in the company's business portal

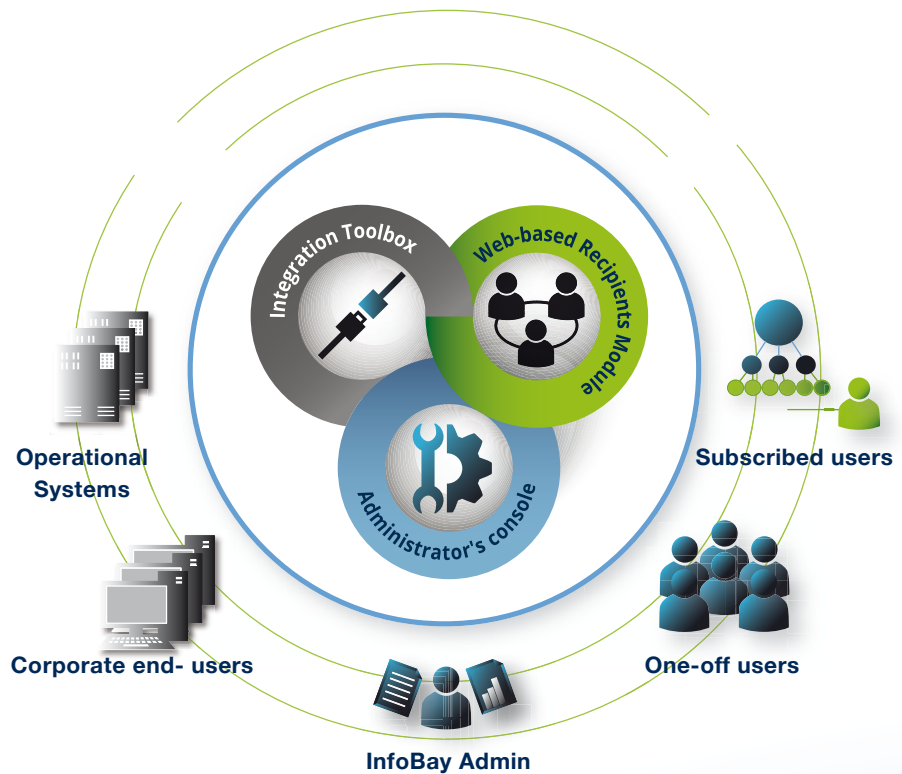

Scalability

- InfoBay supports small enterprises to large-scale service providers

Marketing Content Promotion

- Promote marketing content with InfoBay's optional user-defined e-mail banners
- Enhance your organization's on-line presence by adding content information to InfoBay's recipients' sites

InfoBay: How It Works

The InfoBay platform consists of three main modules seamlessly-integrated with the platform's central storage vault:

Web-based Recipients Module:

- Registered users login regularly with pre-issued authentication credentials.
- **One-off users** access messages via two-factor authentication (Users click on email link sent by InfoBay and enter one-time-password (OTP) sent by text message, email or other means).

Integration Toolbox:

InfoBay includes an array of integration modules:

- InfoBay's Microsoft Outlook plugin allows back-office employees to send messages securely to any recipient.
- InfoBay's APIs enable integration with enterprise and business applications.

Administrator's Console

- The administrator's console provides management and monitoring capabilities to system administrator.
